

 **CodeCloud** Projects Repositories ▾ Snippets ▾ Search for code, commits or repositories...   Support  

You have an empty repository

To get started you will need to run these commands in your terminal.

Configure Git for the first time

```
git config --global user.name "Armendariz, Edy (ea856a)"
git config --global user.email "ea856a@att.com"
```

Working with your repository

I just want to clone this repository

If you want to simply clone this empty repository then run this command in your terminal.

```
git clone https://codecloud.web.att.com/scm/~ea856a/monitoring-agent.git
```

My code is ready to be pushed

If you already have code ready to be pushed to this repository then run this in your terminal.

```
cd existing-project
git init
git add --all
git commit -m "Initial Commit"
git remote add origin https://codecloud.web.att.com/scm/~ea856a/monitoring-agent.git
git push -u origin master
```

My code is already tracked by Git

If your code is already tracked by Git then set this repository as your "origin" to push to.

```
cd existing-project
git remote set-url origin https://codecloud.web.att.com/scm/~ea856a/monitoring-agent.git
git push -u origin --all
git push origin --tags
```

All done with the commands?

Refresh
